

SPIE Hungaria Kft.

Energy Management System Policy

SPIE is committed to continuously improving its energy performance. To achieve this goal, it intends to operate an Energy Management System (hereinafter: EnMS).

In order to enhance its energy performance, SPIE defines objectives, targets, and the resource requirements needed for their implementation. Progress is reviewed periodically, and appropriate corrective and preventive actions are implemented as needed.

SPIE operates the EnMS in compliance with all applicable legal requirements and internal regulations.

Before procuring products and services, SPIE examines their energy efficiency and performance, making decisions that best support the improvement of its energy performance.

We intend to implement the EnMS in accordance with the EN ISO 50001 standard and integrate it into our existing Management System. The EnMS will be continuously improved.
